Interesting Frog Facts!

Your eyes are not deceiving you – that’s a Goliath frog next to a baby deer!

Frogs come in many shapes and colors all over the world – except Antarctica!

The large Cane toad, also called “Marine toad” or “Giant toad,” range in size from 15-23 cm (6-9 inches), but may get bigger.

This tiny poison frog measures less than 1 cm (1/2 inch).

The Gold frog from Brasilia, the smallest frog at 3/8 inch.

Discovered only 1996 in Cuba, the *Eleutherodactylus iberia* also grows to only 3/8 inch.

From Egg to Frog

Read.

What looks like a clear blob with a black spot? A frog egg does! Frog eggs feel like jelly. They do not have hard shells. Baby frogs, called tadpoles, hatch from the eggs. A tadpole does not look like an adult frog. It has a tiny head and a long tail. A tadpole changes as it grows. It grows legs and its tail gets smaller. Its tail gets shorter and shorter until it is gone. After that happens, it is an adult frog!

Write.

1. What does a frog egg **look** like? _____

2. What does a frog egg **feel** like? _____

3. When frogs hatch, they are called _____.

4. Write two ways a tadpole looks different from a frog.

5. When a tadpole grows, what happens to its tail? _____

The Life Cycle of a Frog

The Life Cycle of a Frog

This freebie includes two frog life cycle cut and paste activities and two posters. The two activities allow you to easily differentiate for your students.

Choose from two posters, one color and one grayscale, you can post in the classroom or use as reference or key for the cut and paste activities.

Page 3 - Color Poster

Page 4 - Grayscale Poster

Page 5 - Simple Cut and Paste Activity

Students cut the labels at the bottom of the page and paste them below the corresponding image.

Page 6 - Double Cut and Paste Activity

Students cut the labels and the pictures of the stages of the life cycle at the bottom of the page and paste them into the flow chart. **Careful! The labels do NOT match the pictures above them!** Students will need to cut the labels and the pictures out separately.

Five Little Tadpoles

Science Rhyme: Life cycle of a frog

Directions: Read to someone at home using some feeling, (expression)!

Five Little tadpoles swimming near the shore.

The first one said, “Let’s swim some more!”

The second one said, “Let’s rest awhile!”

The third one said, “Swimming makes me smile!”

The fourth one said, “My legs are growing long!”

The fifth one said, “I’m getting very strong!”

Five little tadpoles will soon be frogs.

They’ll jump from water and sit on logs.
